CATALOGUE

An effective and useful gift

Undoubtedly, USB sticks are a very popular gift. We use them constantly - at work and in free time when we download data or want to see some movies ...

The possibilities in terms of form are also numerous - from standard shapes to those more humorous, in the form of your logo, means of transport.

Each USB stick can also be equipped with a wide range of accessories: cord, velvet bag, key ring or neck-band.

Pad print Perfect for curved and smaller surfaces, since high precision can be achieved. It is printed with special soft pads that adapt to the surface of the product.

Debossing Striking 3D appearance. Subtle tone on tone look. Great for real and imitation leather.

Doming sticker The logo leaves the best impression when it is printed in full color technique. Thanks to our printers, we can print the logo in any color for the same price. Each print is then filled with a single layer of polymer transparent material. This makes the logo even more pronounced, while protecting it, so that it remains fully visible even with very frequent use. The sticker can be trimmed in a wide variety of shapes.

Engraving For personalization with laser engraving, there are several reasons. This technique is currently very popular for adding text or logo to the product. It is also the most economical way of personalization. Our engravers always make an extremely accurate reproduction of your desired graphics. Especially attractive is the engraving on wooden USB keys, where the laser leaves a gently burned trail and ensures a rustic look.

Digital print Mostly used in smaller series. This method allows full-color printing, so that different color toppings or even photographs are possible.

Printing with lacquer Elegant alternative to engraving! If you want a more discreet finishing on USB sticks, then the right way for you is printing with lacquer. A particularly attractive look is provided on metal USB keys, because light fractures on the printed surface and gives the impression that the metal is embedded.

3D engraving Laser engraving technology that gives the impression of multidimensionality. Engraved on plexiglass and glass. The engraving machine creates a focused laser beam in the middle of the glass. Due to the thermal reaction, tiny bubbles are formed. The product is very aesthetic and attractive.
